Scan

```
package main

import (
    "fmt"

    "github.com/gogf/gf/v2/os/gcmd"
)

func main() {
    name := gcmd.Scan("What's your name?\n")
    fmt.Println("Your name is:", name)
}
```

```
> What's your name?
john
> Your name is: john
```

Scanf

```
package main

import (
    "fmt"

    "github.com/gogf/gf/v2/os/gcmd"
)

func main() {
    name := gcmd.Scan("> What's your name?\n")
    age := gcmd.Scanf("> Hello %s, how old are you?\n", name)
    fmt.Printf("> %s's age is: %s", name, age)
}
```

```
> What's your name?
john
> Hello john, how old are you?
18
> john's age is: 18
```
