Drivergdb

```
// Register registers custom database driver to gdb.
func Register(name string, driver Driver) error
```

namemysql, mssql, pgsql

gdbgdb<https://github.com/gogf/gf/tree/master/contrib/drivers>

*CoreDriver

```
// DriverMysql is the driver for mysql database.
type DriverMysql struct {
    *Core
}

// New creates and returns a database object for mysql.
// It implements the interface of gdb.Driver for extra database driver
installation.
func (d *DriverMysql) New(core *Core, node *ConfigNode) (DB, error) {
    return &DriverMysql{
        Core: core,
    }, nil
}
```
